Week 3b – Average in Fact

Semester 1, 2021

Developed by:
Dr. Agnes Haryanto
Agnes.Haryanto@monash.edu

Recall – Star Schema Components

程序代写代做 CS编程辅导

- There are **Three** main components of the Star Schema:

1. Facts
2. Dimensions
3. Attributes

Recall – Fact

程序代写代做 CS编程辅导

- A Fact Table consists of key s from each dimension, and fact measures.
- A Fact Table is created by a join operation, that joins several tables from the operational database.
- Fact tables are created either through TempFact or directly retrieval from the tables in the operational database.
- The fact measure itself is an aggregated value.
 - In the SQL command, the fact measure attribute in the Fact Table is created using an aggregate function, such as count or sum, and the group by operation.

Average in the Fact

程序代写代做 CS编程辅导

- The problem of Average in problem. is known as the ***Average of an Average***
 - This problem is well known in Mathematics and Statistics.
 - Average of an average will simply produce an incorrect average result.
- Hence, it is not desirable to have an average measure in the fact.
 - *Exceptional case*: when the analysis ALWAYS uses all the dimensions (e.g. Determinant Dimensions)

Min & Max in the Fact

程序代写代做 CS编程辅导

- If Average should not be used as a fact, how about Min or Max?
 - Yes, we can.
 - Because Max of Max is always a global Max, and Min of Min is always a global Min.

Average in the Fact – Conclusion

程序代写代做 CS编程辅导

- **Average in the Fact is not a fact**, although technically it satisfies the two criteria of the fact (e.g. must be numerical and aggregate value).
- *Min* and *Max* in the Fact can be used, since Min Score and Max Score are valid fact measures (e.g. they are numerical and aggregated values).
- In general, `count` and `sum` are more common.
